## **EXECUTIVE SUMMARY**

*Central Ground Water Board, an apex Organization under Ministry of Water Resources, River development and Ganga rejuvenation, Government of India, is carrying out the monitoring of ground water levels all over the country for generating a sound database so that the changes in ground water regime could be scientifically studied, analysed and strategies for its optimal utilization can be planned.*

*The behaviour of ground water table during the ground water year 2020-2021 in the state of Karnataka has been studied by monitoring a set of dug wells and purpose-built piezometers during the months of November 2020 and January 2021. Due to COVID-19 related restrictions monitoring could not be carried out during May and Aug 2020. Hence to represent these seasons last five years average water levels is considered. As of January 2021, Central Ground Water Board, South western Region, monitors 1413 dug wells and 262 tube wells/piezometers to study the ground water scenario of the state of Karnataka.*

*The present compilation relates to the year 2020-2021. It provides information pertaining to water levels and also chemical quality of the phreatic aquifer. Thematic maps depicting the ground water scenario along with geochemical quality are furnished and discussed in this report. In addition, the fluctuations in water level and piezometric surface between different time frames have been analysed and presented. Various thematic maps presented reflect the effect of rainfall received during the period of study and the long-term behaviour of water level according to ground water recharge and draft conditions obtained in various agro-climatic zones.*

*The data on seasonal rainfall during the year are furnished to correlate the effect of the rainfall on water levels. The highest monsoon rainfall in the State during the year 2020 was 4877.7 mm received in Udupi and minimum of 382 mm is received in Mandya district. The departure of seasonal rainfall for the period mentioned ranged from 2% (Hassan district) to 78% (Kolar district).*

*During pre monsoon 2020, shows about 74 % of the wells are showing depth to water level within 10mbgl. During post monsoon 2020, about 93.5% of the wells showing depth to water level within 10 mbgl. Annual fluctuation during post-monsoon 2020 it is observed that, 55% of the wells in the State showing fall in water level and 45% of the wells in the state showing rise in water level. Decadal mean water level of 2010-2019 with respect to November 2020, 29% of wells recorded fall and 71% of wells recorded rise in water levels. During January 2021, 77% of wells recorded rise and 23% of wells recorded fall in water levels in comaprision with decadal mean water level of 2011-2020.*

*The chemical quality of ground water collected from 818 GWM stations representing the shallow aquifers during May 2019 indicated that In general the ground water quality in the state is fresh in about 51 % of the Ground Water Monitoring wells as indicated by the EC value less than 750  $\mu\text{s}/\text{cm}$  at 25°C. In respect of chloride, the data indicated that, 99% samples are within 'permissible' limits for drinking and about one percentage samples are unsuitable for drinking purpose. Nitrate concentration in ground water is indicated that, 81% of the samples in the State are found to be falling under 'desirable limit 'and 19% samples are beyond permissible limits. Similarly analysis indicates that, in the State, 87 % of the samples collected were found to contain fluoride concentration in the 'permissible' (<1.5 mg/l) range. Thus, about 13% of the analysed samples are in the 'unsuitable' range of drinking water standards.*

# **GROUND WATER YEAR BOOK OF KARNATAKA (2020-2021)**

## **I. INTRODUCTION**

The state of Karnataka has a geographical area of 1, 91, 761 sq. km. and is situated between N. Latitudes 11°31" and 18°45' and E. Longitudes 74°12' and 78°40'. For administrative purposes, the state is divided into 30 districts and 176 taluks.

The Central Ground Water Board, South Western Region is monitoring the water levels in ground water monitoring wells in the state of Karnataka four times a year, viz. May (between 20<sup>th</sup> and 31<sup>st</sup>), August (between 20<sup>th</sup> and 31<sup>st</sup>), November (between 1<sup>st</sup> and 10<sup>th</sup>) and January (between 1<sup>st</sup> and 10<sup>th</sup>). Water samples from the Ground Water Monitoring Wells are collected once in a year i.e. during May. Besides these, monitoring of monthly water levels is being carried out at select Ground Water Monitoring Wells in Bengaluru Metropolitan area. **Table-1** gives the number of Ground Water Monitoring Wells tapping the phreatic aquifers and the piezometers/tube wells/bore wells tapping the deeper semi-confined to confined aquiferS during the aforesaid periods. The behaviour of water levels are analysed with reference to the rainfall pattern. The data are utilised for the assessment of ground water resource, evaluation, present status of ground water development and also for planning future development. For analytical purposes, only the data of the Ground Water Monitoring Wells tapping phreatic aquifers are considered. The data thus collected are analysed, interpreted and the Ground Water Year book is issued annually with interpreted data and thematic maps depicting the ground water scenario.

The present report discusses the regional behaviour of water levels in both shallow and deeper aquifers for the period between May 2020 and January 2021, which will enable the user agencies to plan developmental strategies. The results of the chemical analysis of water samples collected from Ground Water Monitoring Wells during May 2019 are also discussed.

The district-wise depth to water level data of the dugwells and depth to piezometric surface of piezometres for the measurements during May 2020, August 2020, November 2020 and January 2021 are given as **Annexures I, II & III.**

Background information on physiography, drainage, rainfall, hydrogeological conditions and ground water resources development of the state are also furnished in brief for better understanding of the behaviour of water table.

**Table 1: Number of Ground Water Monitoring Wells in Karnataka during 2020-2021**

<b>Period of Measurement</b>	<b>No. of Wells Monitored</b>		
	<b>Dug Wells</b>	<b>Piezometers/ Tubewells</b>	<b>Total</b>
May 2020	Not Monitored due to COVID 19 restrictions		
August 2020			
November 2020	1437	275	1712
January 2021	1413	262	1675

## PHYSIOGRAPHY

The state of Karnataka is divided into four physiographic units as below;

- a) The narrow **Coastal plain** along the west coast running to about 300 km from Karwar in the north to Mangalore in south. The tract is generally very narrow reaching maximum width of about 40 km at places. The general elevation of the ground varies between 0 to 200 m above mean sea level. The rivers draining the area have a westerly course.
- b) The **Malnad region** with steep mountain ranges and valleys lying immediately east of the former. The general elevation of the area varies from 200m above mean sea level along the boundary with the coastal plain to 1872m above mean sea level at Kudremukh. Its width varies from 50 to 100km. Several rivers like Cauvery and Tungabhadra originate from this region.
- c) The **Northern part** of the State comprises a tableland and its general elevation ranges from 300 to 350 m above mean sea level.
- d) The **Eastern** districts towards south form a plateau, which is characterized by rolling topography with sporadic hills. The general elevation in this track varies from 600 to 1000 m above mean sea level.

## DRAINAGE

The State of Karnataka is drained by the rivers Krishna, Cauvery, Godavari, West flowing minor rivers, Palar, Pennar and Ponnaiyar. The river Krishna with its major tributaries viz. Bhima, Malaprabha, Ghataprabha, Tungabhadra, Upper Krishna and Vedavathi drains nearly 60% of the state area. Cauvery and its tributaries viz. Arkavathi, Hemavathi, Kabini, Shimsha,

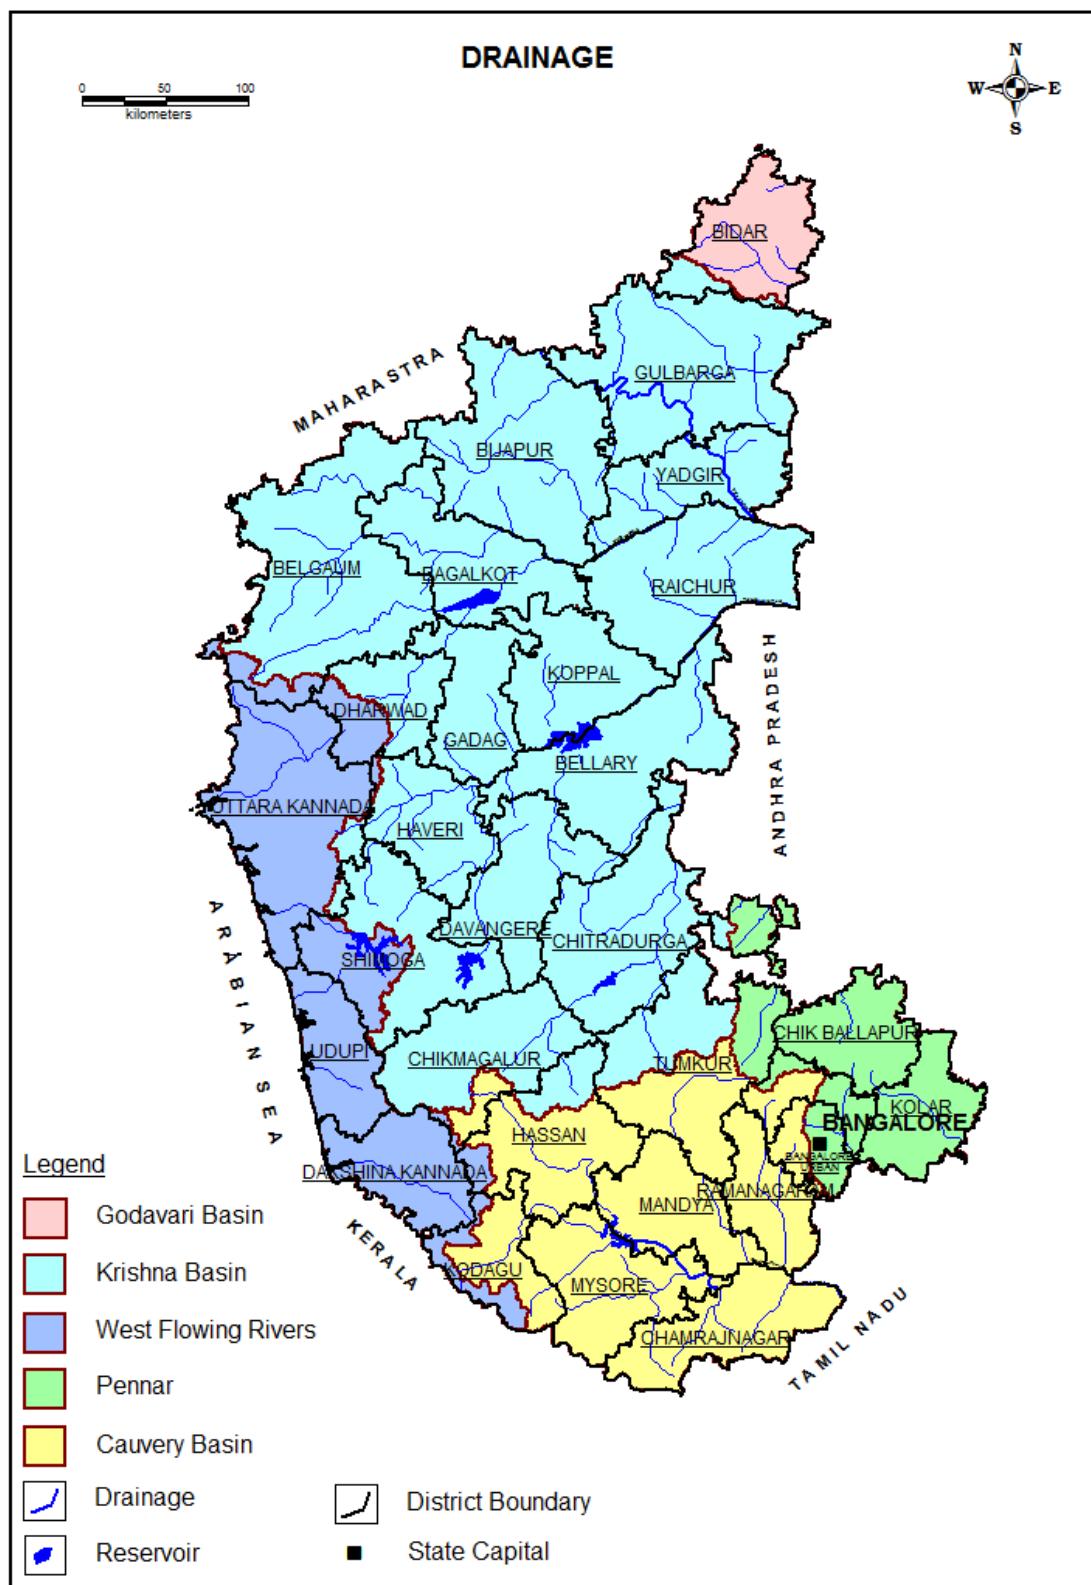

Suvarnavathi and Upper Cauvery drain about 18% of the State area. Palar, Pennar and Ponnaiyar, which originate from the Nandi hills in the southern part of the State drain about 7% of the area. About 2% of the area in the northern district of Bidar is drained by the Godavari river system.

The remaining area is drained by the west flowing rivers such as Kalinadi, Netravathi, Sharavathi, Sita and Swarna etc. The details of the drainage basins and sub basins are given in **Table 2**. And shown in **Plate I**.

**Table 2: Basins, Sub-Basins and Drainage Area**

Drainage		Area		District
Basin	Sub Basin	Sq.Km	%	
Godavari	<b>Karanja</b>	4405	2	<b>Bidar</b>
Krishna	Bhima	19345	10	Bidar, Bijapur,
	Malaprabha	19233	10	Belgaum, Bijapur,
	Tungabhadra	37786	20	Bellary, Shimoga,

**Plate I**

## **DISTRIBUTION OF RAINFALL DURING GROUND WATER YEAR 2020**

Rainfall data corresponding to the measurement of water level has been downloaded from the website of India Meteorological Department and is furnished as **Table-3 to 5**. The rainfall during different periods is given below.

### **DISTRIBUTION OF PREMONSOON RAINFALL (March to May 2020)**

1. The normal seasonal rainfall ranged from 11.8 mm (Kolar district) to 253.7 mm (Kodagu district) whereas the actual rainfall during the season varied from 25.1 mm in Yadgir district and 256.8 mm in Dakshin Kannada district.
2. The departure of seasonal rainfall for the period mentioned ranged from -58% (Yadgir district) to 110% (Koppal district).
3. Rainfall has been excess in Bellary, Belgaum, Bengaluru Rural, Bangalore Urban, Bidar, Chikballapur, Chitradurga, Davanagere, Gadag, Hassan, Kalburgi, Kodagu, Kolar, Koppal, Mandya, Raichur, Ramanagar, Uttara Kannada and Vijayapura districts.
4. Rainfall has been deficient in Yadgir district.
5. Over the remaining districts viz., Bagalkot, Chamrajanagar, Chikmagalur, Dakshin kannada, Dharwad, Haveri, Mysore, Shimoga, Tumkur and Udupi rainfall has been Normal.

### **DISTRIBUTION OF MONSOON RAINFALL (June to September 2020)**

1. The normal seasonal rainfall varies from 276.9 mm (Chitradurga district) to 3742.3 mm (Udupi district) whereas the actual rainfall for this period ranged from 382 mm in Mandya district to 4877.7 mm over Udupi district;
2. The departure of seasonal rainfall for the period mentioned ranged from 2% (Hassan district) to 78% (Kolar district);
3. Rainfall has been excess in the districts of Bagalkot, Bellary, Bangalore Rural, Bangalore Urban, Belgaum, Bidar, Chamarajanagar, Chikballapur, Chitradurga, Davanagere, Dharwad, Gadag, Gulbarga, Kolar, Koppal, Mandya, Mysore, Raichur, Tumkur, Udupi, Uttara Kannada, Vijayapura and Yadgir;
4. Rainfall has been normal in the remaining districts.

### **DISTRIBUTION OF POST MONSOON RAINFALL (OCTOBER to DECEMBER 2020)**

1. The normal seasonal rainfall varies from 125.2 mm (Kalburagi district) to 369.5 mm (Dakshin Kannada district) whereas the actual rainfall for this period ranged from 117.8 mm in Haveri district to 431.3 mm over Udupi district;

2. The departure of seasonal rainfall for the period mentioned ranged from -31% (Kodagu district) to 58% (Udupi district);
3. Rainfall has been excess in the districts of Bagalkot, Belgaum, Bangalore Urban, Bidar, Dakshin Kannada, Gulbarga, Kolar, Koppal, Udupi and Uttara Kannada;
4. Rainfall has been normal in the districts of Bellary, Chamrajnagar, Chikballapur, Chikmagalur, Chitradurga, Davanagere, Dharwad, Gadag, Hassan, Mandya, Raichur, Ramanagara, Shimoga, Tumkur, Vijayapura and Yadgir.
5. Rainfall has been deficient in Bangalore Rural, Haveri, Kodagu and Mysore districts.

**Table 3: RAINFALL STATISTICS FOR PRE MONSOON SEASON  
(Mar-May) 2020**

## HYDROGEOLOGY

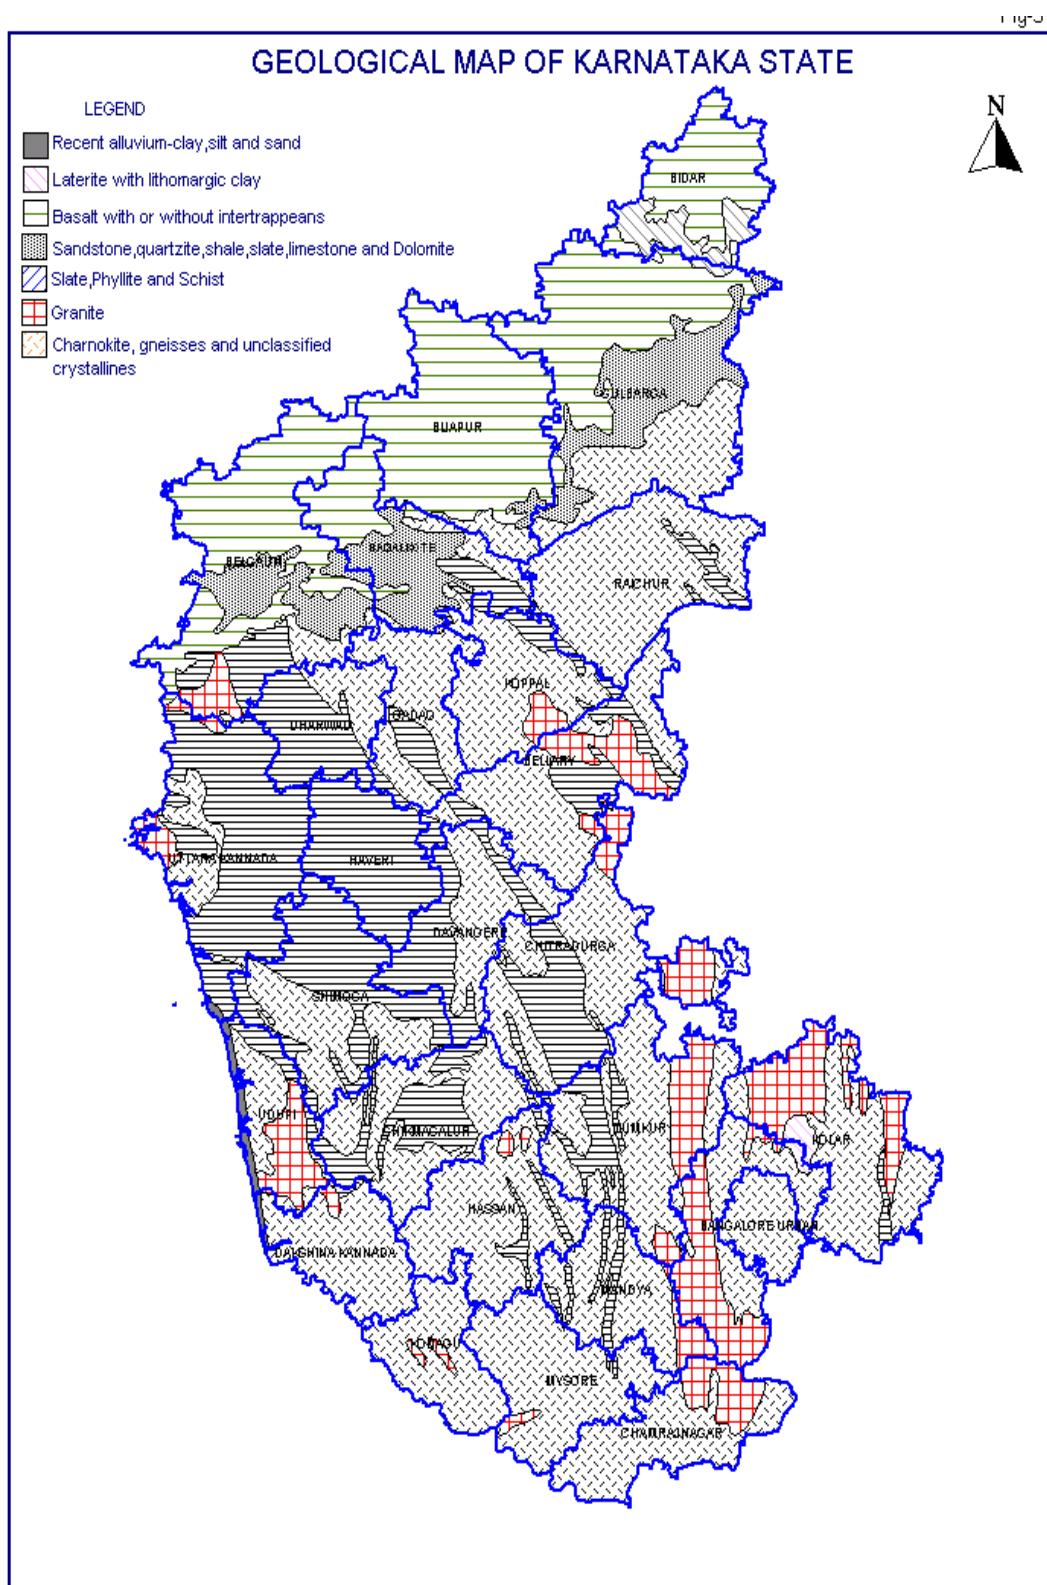

The state of Karnataka is underlain by geological formations ranging in age from Archaean to Recent. Major portion of the State is covered by Peninsular Gneisses, Granites and Dharwarian Schists of Archaean age. Substantial area in the northern part of Karnataka is underlain by basalts, which form a continuation of the Deccan Traps occurring in Maharashtra. The sedimentaries comprising Bhima and Kaladgis occupy a small area in the northern districts. The recent alluvium is restricted to a narrow belt in the coastal area and along stream courses (**Plate-II**). The geological succession in the State is presented in **Table 6**. Majority of the stations are located in Granitic Gneissic region.

Except for the alluvium, which occurs in a limited area, the State is occupied mainly by crystalline rocks and consolidated sedimentaries, which do not possess primary porosity except for the Basalts, which have a limited primary porosity in the form of vesicular zones. Secondary porosity introduced in them through weathering, fracturing and jointing produces the void spaces to hold and transmit ground water. Solution cavities in the limestones, when sufficiently large can form good aquifers.

**Table 6. The geological succession in Karnataka state**

<b>Age</b>	<b>Series/System</b>	<b>Formation</b>
Recent	Soil & Alluvium	Sand and Clay
Pliestocene	Laterite	Laterite
Tertiary to Mesozoic	Deccan Trap Basalt	Hard massive & vesicular Basalts
~~~~~		UNCONFORMITY
Lower Paleozoic to upper Precambrian	Bhima Series	Quartzites, Sandstone, Limestone, Shale and Conglomerates
~~~~~		UNCONFORMITY
Upper Precambrian	Kaladgi Series	Quartzites, Sandstones, Limestones, Shale and Conglomerates
~~~~~		UNCONFORMITY
Lower Precambrian	Dharwar system volcanics Greenstone, metasediments	Dharwar Schists meta sediments Greenstone formations
~~~~~		UNCONFORMITY
Archaean	Peninsular Gneissic complex	Gneisses, Granites, Charnockites, Khondalites

## Plate-II

## II. DEPTH TO WATER LEVEL

Due to covid-19 lockdown restrictions, water level monitoring was not carried out in the State during May 2020 and August 2020. So last 5 years average of water levels (2015-2019) is considered to represent ground water scenario during May and Aug 2020.

### **May 2020**

A statement showing the distribution of Ground Water Monitoring wells along with depth to water level in phreatic aquifers in different depth ranges is presented in **Table-7**. **Plate-III** depicts the ground water scenario in May 2020. Salient features of the depth to water level scenario are given below.

1. A perusal of the water level data reveals that the depth to water level ranged from 0.32 (Mandya district) to 27.1 m bgl (Gadag District).
2. The salient feature of the analysis is that the depth to water level over major part of the State lies within 10 m bgl in 74% of wells analysed, while 26% of wells show depth to water level more than 10 m bgl.
3. Depth to water level of less than 2 m bgl has been recorded in four percentage of wells analysed and noted as isolated pockets in Bangalore Urban, Bangalore Rural, Belgaum, Bijapur, Chikmagalur, Chitradurga, Dakshin Kannada, Davanagere, Hassan, Haveri, Kodagu, Kolar, Koppal, Mandya, Mysore, Raichur, Shimoga, Tumkur and Uttara Kannada districts.
4. Depth to water level in the range of 2 to 5 m bgl has been recorded in 23% of wells analysed and noted in all the districts.
5. Depth to water level in the range of 5 to 10 m bgl has been recorded in 47% of wells analysed and noted in all the districts.
6. Depth to water level in the range of 10 to 20 m bgl has been observed in 25% of wells analysed and noted in all the districts.
7. Depth to water level in the range of more than 20 m bgl has been noted in one percentage of wells analysed and noted as isolated pockets in Bagalkot, Belgaum, Bidar, Bijapur, Dharwad, Gadag, Hassan, Mysore and Shimoga districts.

**Table-7 : Depth to water level (May 2015-2019)**

## **AVERAGE DEPTH TO PIEZOMETRIC SURFACE (MAY 2015 –MAY 2019)**

Average Depth to piezometric surface has been recorded from piezometers spread all over the State in hard rock areas. The statement showing average depth to piezometric surface during May 2015 to May 2019 is given in **Table 8**. Salient features of the average depth to piezometric surface are given below;

1. A perusal of the piezometric surface data reveals that the depth to water level ranged from 1.76 (Raichur district) to 167.64 m bgl (Tumkur District).
2. The salient feature of the analysis is that the depth to piezometric surface within 10 m bgl in 24% of wells analysed, while 76% of wells show depth to water level more than 10 m bgl.
3. Depth to piezometric surface of less than 5 m bgl has been recorded in 7% of wells analysed and noted in Bangalore Urban, Belgaum, Chikmagalur, Davanagere, Kodagu, Kolar, Mandya, Raichur, Shimoga, Tumkur and Uttara Kannada districts.
4. Depth to piezometric surface in the range of 5 to 10 m bgl has been recorded in 17% of wells analysed and noted in Bangalore Rural, Bangalore Urban, Belgaum, Bellary, Bijapur, Chamrajnagar, Chikmagalur, Dakshin Kannada, Dvanagere, Gulbarga, Hassan, Koppal, Mandya, Mysore, Raichur, Tumkur and Uttara Kannada districts.
5. Depth to water level in the range of 10 to 20 m bgl has been observed in 35% of wells analysed and noted in all the districts except in Raichur district.
6. Depth to water level in the range of 20 to 40 m bgl has been observed in 24% of wells analysed.
7. Depth to water level in the range of more than 40 m bgl has been noted in 17% of wells analysed and noted in Bidar, Chamrajnagar, Chitradurga, Gulbarga, Hassan, Kolar and Tumkur districts.

**Plate-III**

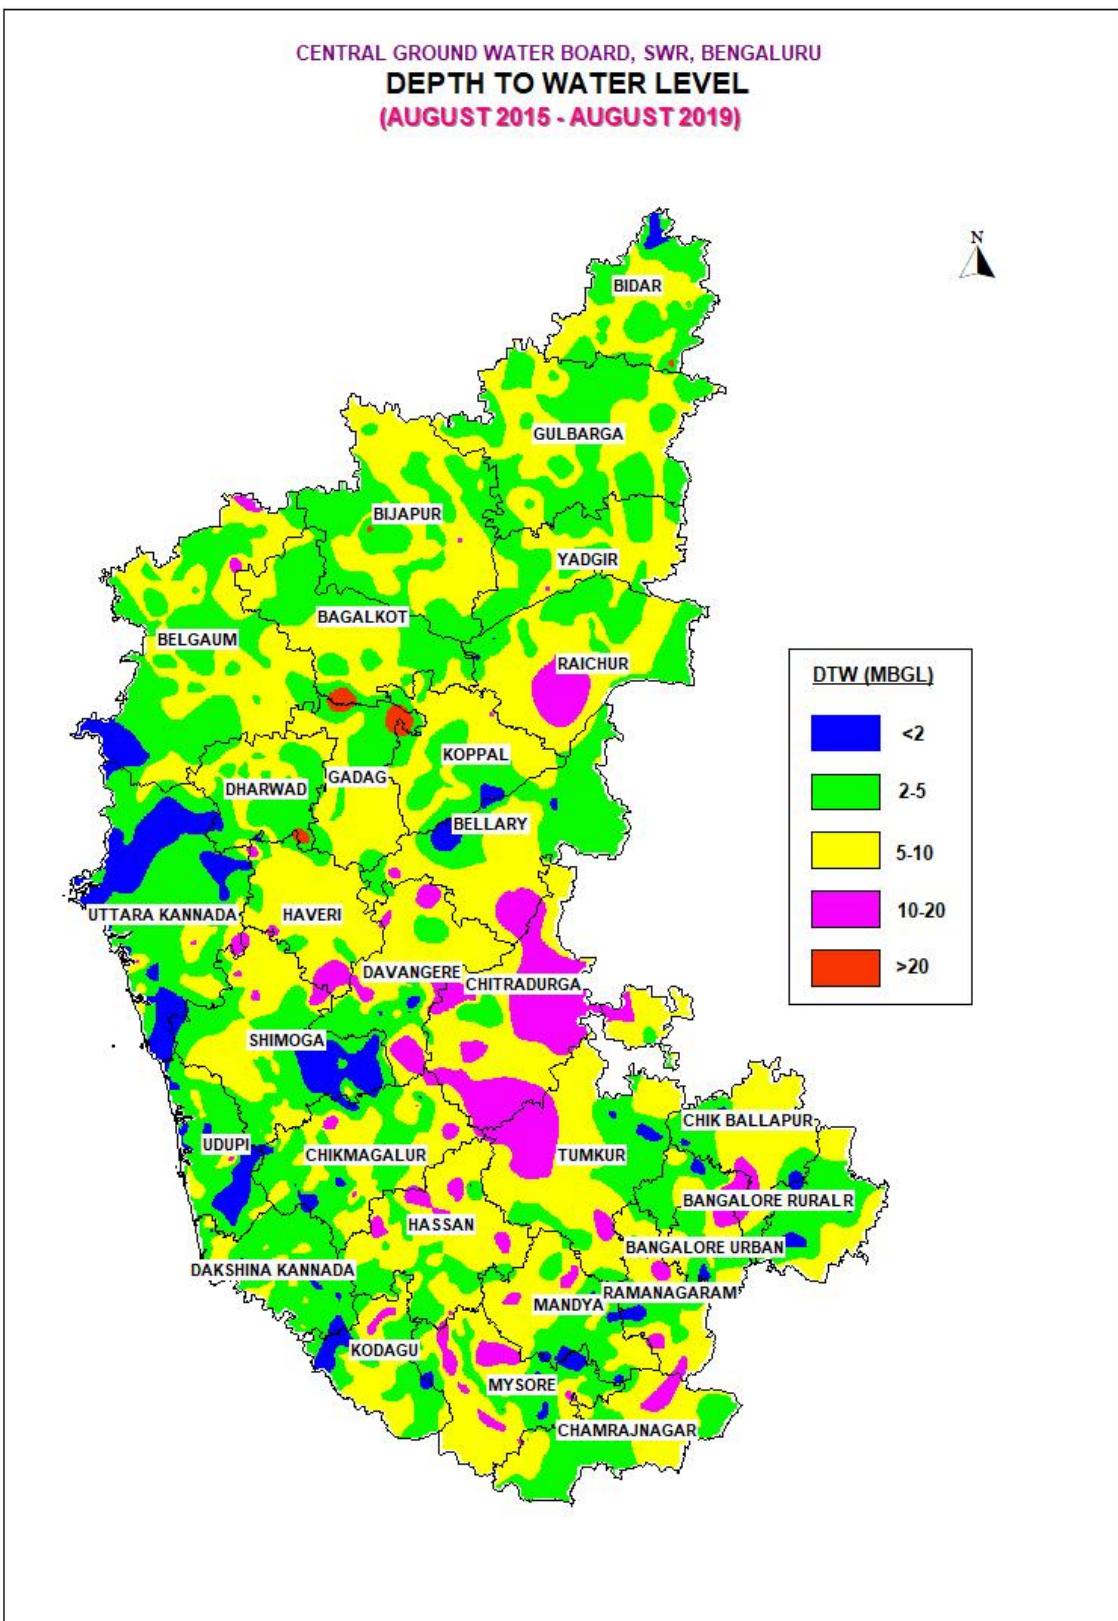

## **August 2020**

The statement showing the distribution of Ground Water Monitoring wells along with depth to water level of phreatic aquifer in different depth ranges is presented in **Table-9** and **Plate-IV** depicts the ground water scenario in August 2020. Salient features of the depth to water level scenario are given below.

1. A perusal of the water level data reveals that the depth to water level ranged from 0.05 m bgl (Kolar district) to 27.83 m bgl (Bagalkot district).
2. The salient feature of the analysis is that the depth to water level over major part of the State lies within 10 m bgl in 87% of wells analysed, while 13% of wells show depth to water level more than 10 m bgl.
3. Depth to water level of less than 2 m bgl has been recorded in 14% of wells analysed and noted in all the districts except in Bagalkot, Chamrajnagar and Gadag.
4. Depth to water level in the range of 2 to 5 m bgl has been recorded in 37% of wells analysed and noted in all the districts.
5. Depth to water level in the range of 5 to 10 m bgl has been recorded in 36% of wells analysed and noted in all the districts.
6. Depth to water level in the range of 10 to 20 m bgl has been recorded in 12% of wells analysed and noted in all the districts except Belgaum, Dakshin Kannada, Davanagere, Udupi and Uttara Kannada districts.
7. Depth to water level in the range of more than 20 m bgl has been recorded in noted in one percentage of wells analysed and noted as isolated pockets in Bagalkot, Bidar, Bijapur, Dharwad, Gadag, Hassan and Mysore districts.

## **AVERAGE DEPTH TO PIEZOMETRIC SURFACE (AUG 2015 – AUGUST 2019)**

Average Depth to piezometric surface has been recorded from piezometers spread all over the State in hard rock areas. The statement showing average depth to piezometric surface during August 2015 to August 2019 is given in **Table10**. Salient features of the average depth to piezometric surface are given below;

1. A perusal of the piezometric surface data reveals that the depth to water level ranged from 1.05 (Udupi district) to 147.19 m bgl (Kolar District).
2. The salient feature of the analysis is that the depth to piezometric surface within 10 m bgl in 39% of wells analysed, while 61% of wells show depth to water level more than 10 m bgl.
3. Depth to piezometric surface of less than 2 m bgl has been recorded in four percentage of wells analysed and noted in Belgaum, Bellary, Chikmagalur, Gulbarga, Raichur, Udupi and Uttara Kannada districts.
4. Depth to piezometric surface of 2 to 5 m bgl has been recorded in 14% of wells analysed and noted in Bangalore Rural, Bangalore Urban, Belgaum, Bellary, Bijapur, Dakshin Kannada, Davanagere, Gulbarga, Kodagu, Kolar, Mandya, Mysore, Raichur, Shimoga, Tumkur and Uttara Kannada districts.
5. Depth to piezometric surface in the range of 5 to 10 m bgl has been recorded in 21% of wells analysed and noted in all the districts except in Chitradurga, Dharwad, Mandya, Mysore and Shimoga.
6. Depth to water level in the range of 10 to 20 m bgl has been observed in 27% of wells analysed and noted in all the districts except in Udupi and Uttara Kannada districts.
7. Depth to water level in the range of 20 to 40 m bgl has been observed in 20% of wells analysed.
8. Depth to water level in the range of more than 40 m bgl has been noted in 14% of wells analysed and noted in Chamrajnagar, Chitradurga, Hassan, Kolar and Tumkur districts.

## November 2020

The statement showing the distribution of ground water monitoring wells along with depth to water level of phreatic aquifer in different depth ranges is presented in **Table-11** and **Plate-V** depicts the ground water scenario in November 2020.

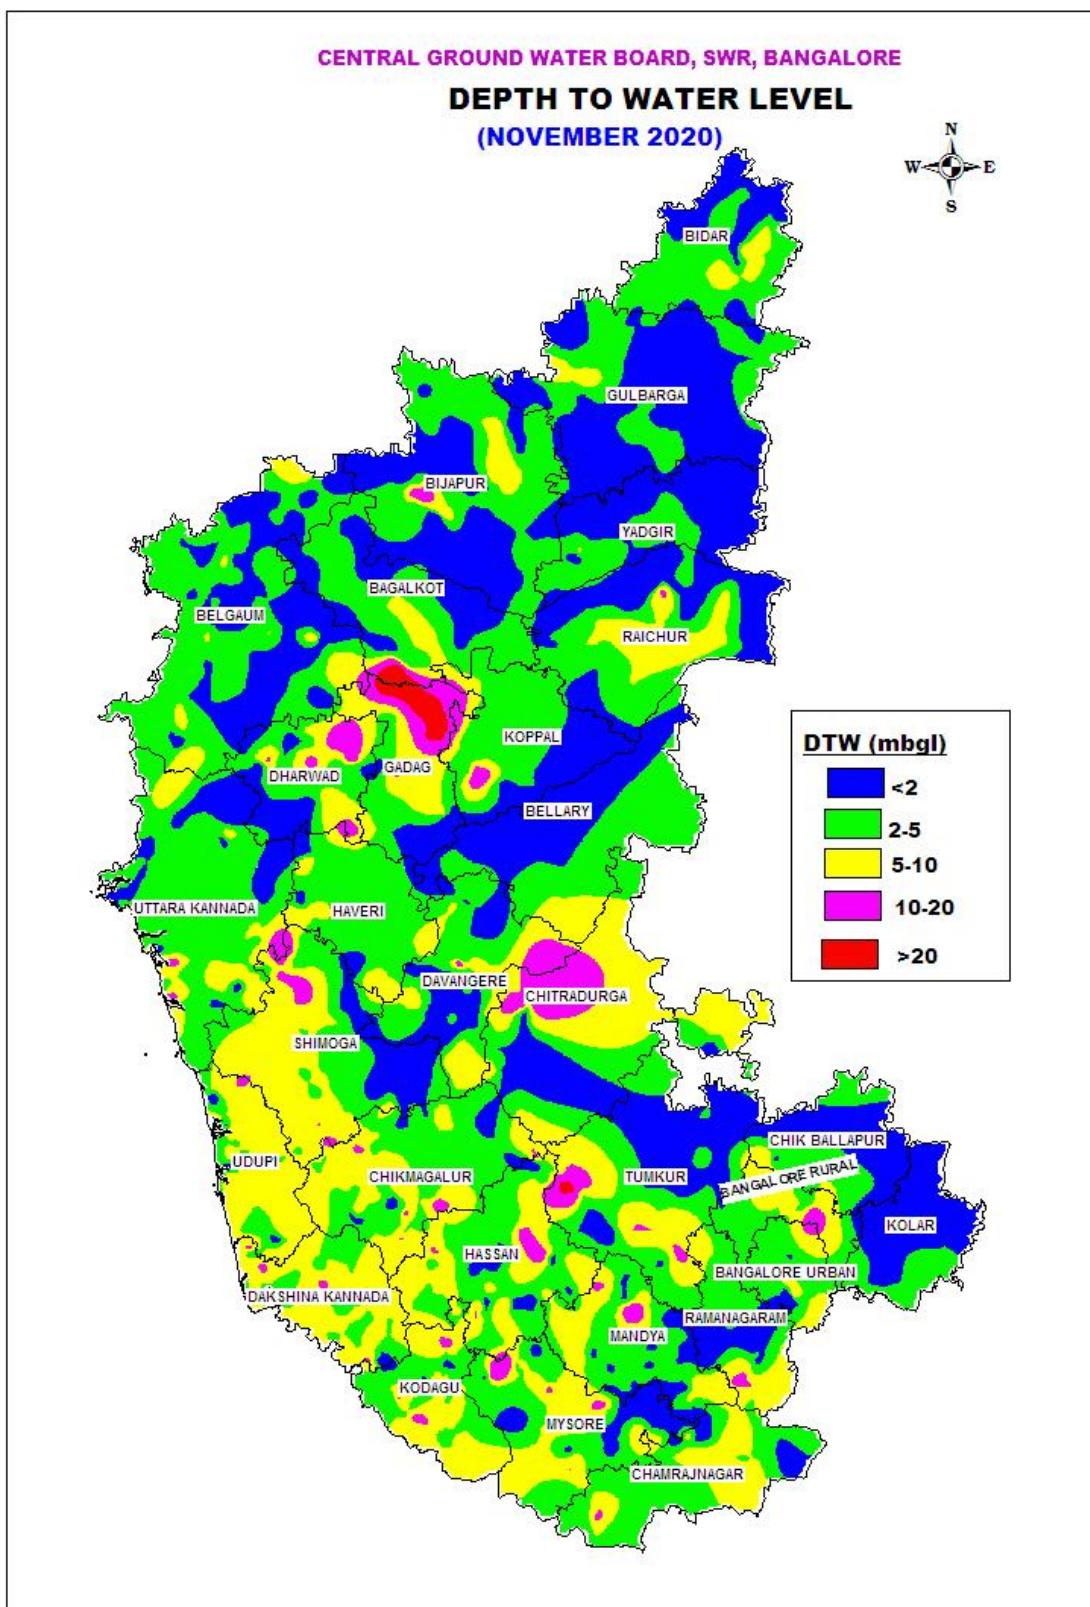

1. A perusal of the water level data reveals that the depth to water level ranged from 0.01 m bgl (Belgaum, Kolar and Tumkur district) to 32.50 m bgl (Bagalkot district).
2. The salient feature of the analysis is that the depth to water level over major part of the State lies within 10 m bgl in 93% of wells analysed, while 7 % of wells show depth to water level more than 10 m bgl. Depth to water level of less than 2 m bgl has been recorded in 33 % of wells analysed and noted all over the State.
3. Depth to water level in the range of 2 to 5 m bgl has been recorded in 36% of wells analysed and noted in all the districts.

4. Depth to water level in the range of 5 to 10 m bgl has been recorded in 24 % of wells analysed and noted in all the districts.
5. Depth to water level in the range of 10 to 20 mbgl has been recorded in 6% of the wells analysed and observed in Bangalore Rural, Bangalore Urban, Bidar, Bijapur, Chamarajanagar, Chikmagalur, Chitradurga, Dakshin Kannada, Davanagere, Dharwad, Gadag, Hassan, Kodagu, Koppal, Mandya, Mysore, Raichur, Shimoga, Tumkur Udupi and Uttara Kannada districts.
6. Depth to water level more than 20 m bgl has been noted in 1 % of wells analysed and noted as isolated pockets in Bagalkot, Gadag, and Tumkur districts.

**Table 11 DEPTH TO WATER LEVEL (NOVEMBER 2020)**

## **DEPTH TO PIEZOMETRIC SURFACE (November 2020)**

Depth to piezometric surface has been recorded from piezometers spread all over the State in hard rock areas. The statement showing depth to piezometric surface is given in **Table-12**. Salient features of the depth to piezometric surface during November 2020 are given below;

1. The depth to piezometric surface ranged from 0.01 m bgl (Raichur district) to 176.78 m bgl (Kolar District) in Karnataka.
2. 52 % of wells have recorded depth to piezometric surface within 10 m bgl and 48 % of wells show depth to piezometric surface more than 10 m bgl.
3. Depth to piezometric surface of less than 2 m bgl has been recorded in 12 % of wells analysed and this has been noted in the districts of Bagalkot, Bangalore Urban, Belgaum, Bellary, Bidar, Bijapur, Chikmagalur, Davanagere, Gulbarga, Hassan, Kodagu, Kolar, Koppal, Mandya, Mysore, Raichur, Shimoga, Tumkur and Uttara Kannada districts.
4. Depth to piezometric surface in the range of 2 to 5 m bgl has been recorded in 21 % of wells analysed and noted in Bangalore Rural, Bangalore Urban, Belgaum, Bellary, Bidar, Bijapur, Chamarajanagar, Chikmagalur, Dakshin Kannada, Davanagere, Gulbarga, Hassan, Haveri, Kodagu, Kolar, Koppal, Mandya, Mysore, Raichur, Shimoga, Tumkur, and Uttara Kannada districts.
5. Depth to piezometric surface in the range of 5 to 10 m bgl has been recorded in 19 % of wells analysed and noted in Bangalore Rural, Bangalore Urban, Belgaum, Bellary, Bidar, Bijapur, Chamarajanagar, Chikmagalur, Chitradurga, Dakshin Kannada, Davanagere, Gadag, Gulbarga, Hassan, Kolar, Mysore, Shimoga, Tumkur, Udupi and Uttara Kannada districts.
6. Depth to piezometric surface in the range of 10 to 20 m bgl has been observed in 28 % of wells analysed and noted in Bangalore Rural, Bangalore Urban, Belgaum, Bidar, Chamarajanagar, Chikmagalur, Chitradurga, Dakshin Kannada, Davanagere, Dharwad, Gadag, Gulbarga, Hassan, Haveri, Kodagu, Kolar, Mandya, Mysore, Tumkur and Udupi districts.
7. Depth to piezometric surface in the range of 20 to 40 m bgl has been noted in 15 % of wells analysed and noticed in the districts viz. Bangalore Rural, Bangalore Urban, Bellary, Chamarajanagar, Chitradurga, Hassan, Haveri, Kolar and Tumkur districts.
8. Depth to piezometric surface in the range of more than 40 m bgl has been noted in 5 % of wells analysed and is observed as isolated patches in Bangalore Rural, Kolar and Tumkur districts.

## **January 2021**

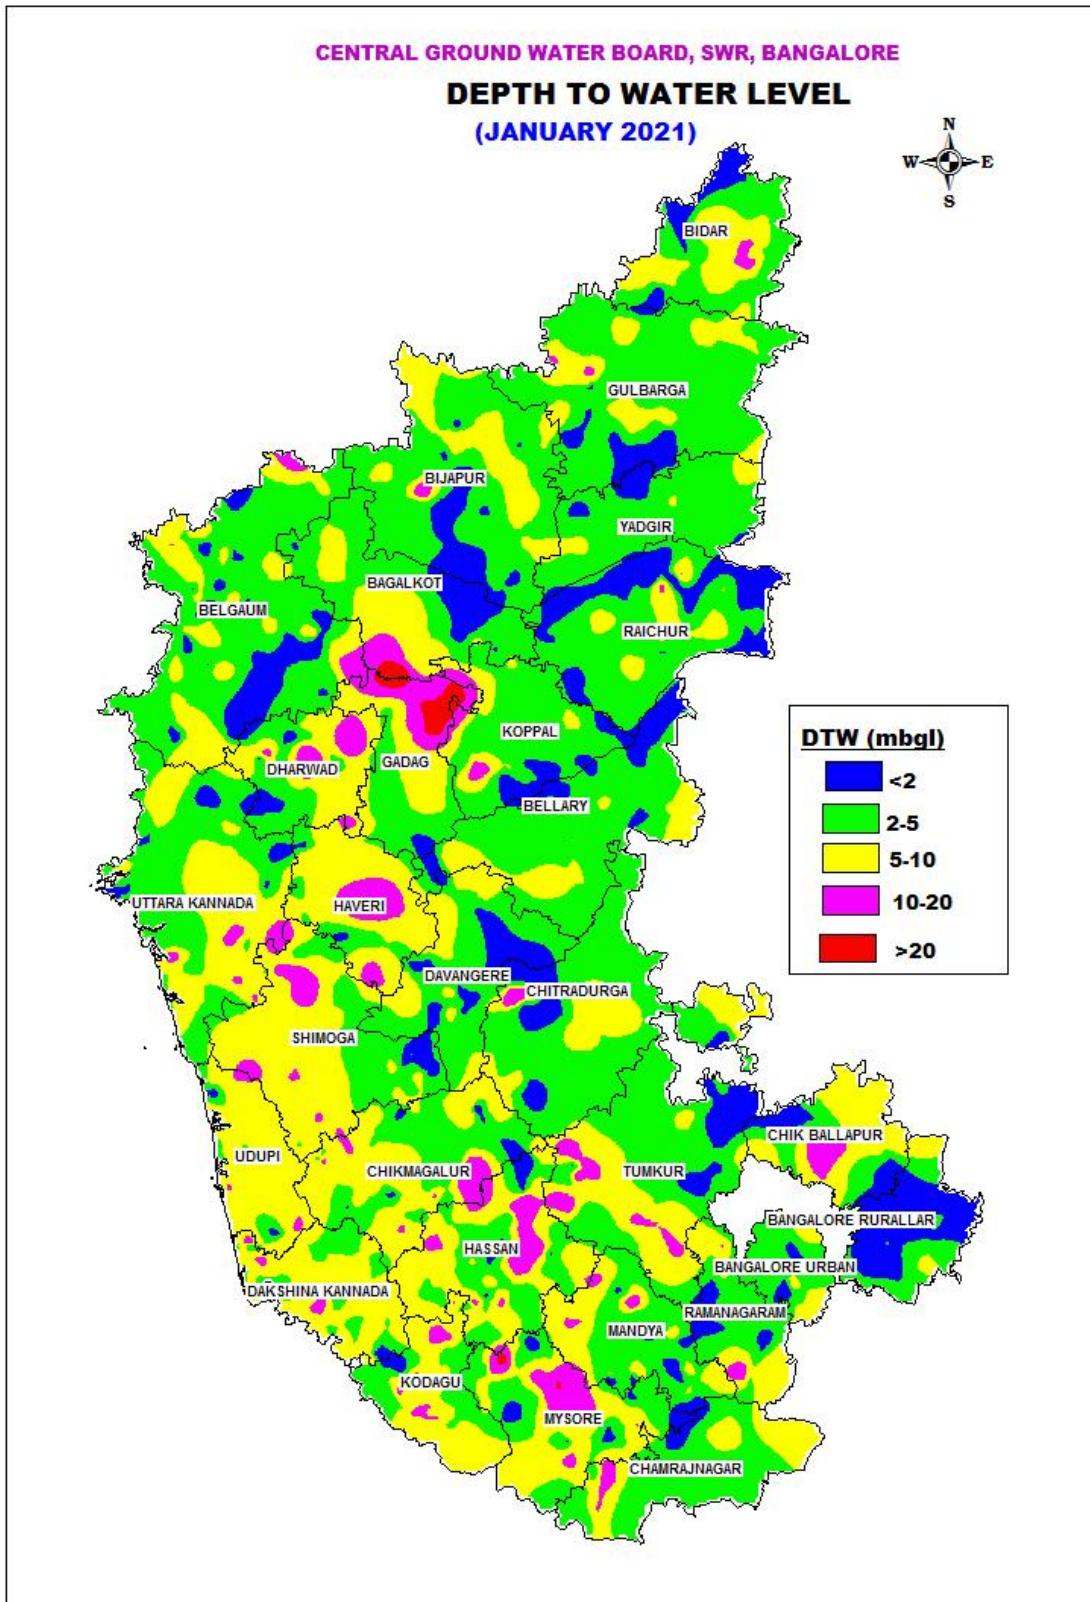

The statement showing the distribution of ground water monitoring wells along with depth to water level of phreatic aquifer in different depth ranges is presented in **Table 13** and **Plate-VI** depict the ground water scenario in January 2021. Salient features of the depth to water level scenario during January 2021 are given below.

8. A perusal of the water level data reveals that the depth to water level ranged from 0.03 m bgl (Kolar and Mandya districts) to 27.54 m bgl (Bagalkot district).
9. The salient feature of the analysis is that the depth to water level over major part of the State lies within 10 m bgl in 90 % of wells analysed, while 10 % of wells show depth to water level more than 10 m bgl. Depth to water level of less than 2 m bgl has been recorded in 19 % of wells analysed and noted all over the State.
10. Depth to water level in the range of 2 to 5 m bgl has been recorded in 38 % of wells analysed and noted in all the districts.
11. Depth to water level in the range of 5 to 10 m bgl has been recorded in 33 % of wells analysed and noted in all the districts.
12. Depth to water level in the range of 10 to 20 m bgl has been recorded in 9% of wells analysed and observed in all districts except Bagalkot, Bellary and Davanagere districts.
13. Depth to water level more than 20 m bgl has been noted in 1 % of wells analysed and noted as isolated pockets in Bagalkot, Gadag and Mysore districts.

**Table 13 DEPTH TO WATER LEVEL (JANUARY 2021)**

**Plate-VI**

## **DEPTH TO PIEZOMETRIC SURFACE**

Depth to piezometric surface has been recorded from piezometers spread all over the State in hard rock areas. The statement showing depth to piezometric surface is given in **Table 14**. Salient features of the depth to piezometric surface during January 2021 are given below;

1. The depth to piezometric surface ranged from 0.1 m bgl (Bangalore Urban district) to 184.5 m bgl (Tumkur district) in Karnataka.
2. 47% of wells have recorded depth to piezometric surface within 10 m bgl and 53% of wells show depth to piezometric surface more than 10 m bgl.
3. Depth to piezometric surface of less than 2 m bgl has been recorded in 8% of wells analysed and this has been noted in the districts of Bangalore Rural, Bangalore Urban, Belgaum, Bellary, Chikmagalur, Gulbarga, Koppal, Mandya, Raichur and Tumkur.
4. Depth to piezometric surface in the range of 2 to 5 m bgl has been recorded in 17% of wells analysed and noted in Bagalkot, Bangalore Urban, Belgaum, Bellary, Bidar, Bijapur, Chikmagalur, Davanagere, Gulbarga, Haveri, Koppal, Mandya, Mysore, Raichur, Shimoga, Tumkur and Uttara Kannada districts.
5. Depth to piezometric surface in the range of 5 to 10 m bgl has been recorded in 23% of wells analysed and noted in Bangalore Rural, Bangalore Urban, Belgaum, Bellary, Bidar, Bijapur, Chamarajanagar, Chikmagalur, Chitradurga, Dakshin Kannada, Davanagere, Gadag, Gulbarga, Hassan, Kodagu, Mysore, Shimoga, Udupi and Uttara Kannada districts.
6. Depth to piezometric surface in the range of 10 to 20 m bgl has been observed in 33% of wells analysed and noted in almost all districts except Bagalkot, Bellary, Koppal and Raichur districts.
7. Depth to piezometric surface in the range of 20 to 40 m bgl has been noted in 15% of wells analysed and noticed in the districts viz. Bagalkot, Bangalore Rural, Bangalore Urban, Bellary, Chitradurga, Hassan, Haveri, Kodagu, Kolar and Tumkur districts.
8. Depth to piezometric surface in the range of more than 40 m bgl has been noted in 5% of wells analysed and is observed as isolated patches in Bidar, Kolar and Tumkur districts.

### **III. FLUCTUATION OF WATER LEVEL**

#### **NOVEMBER 2019 & NOVEMBER 2020**

The statement showing the distribution of ground water monitoring wells falling in different ranges of fluctuation is presented in **Table 15**. A comparison of water level shows that a fall in the water level is recorded in 55 % of wells analysed, while 45 % recorded rise. The fluctuation in water level has been plotted in **Plate VII**. A perusal of the plate shows that a general rise in the range of 0 – 2 m is noticed in major part of the area.

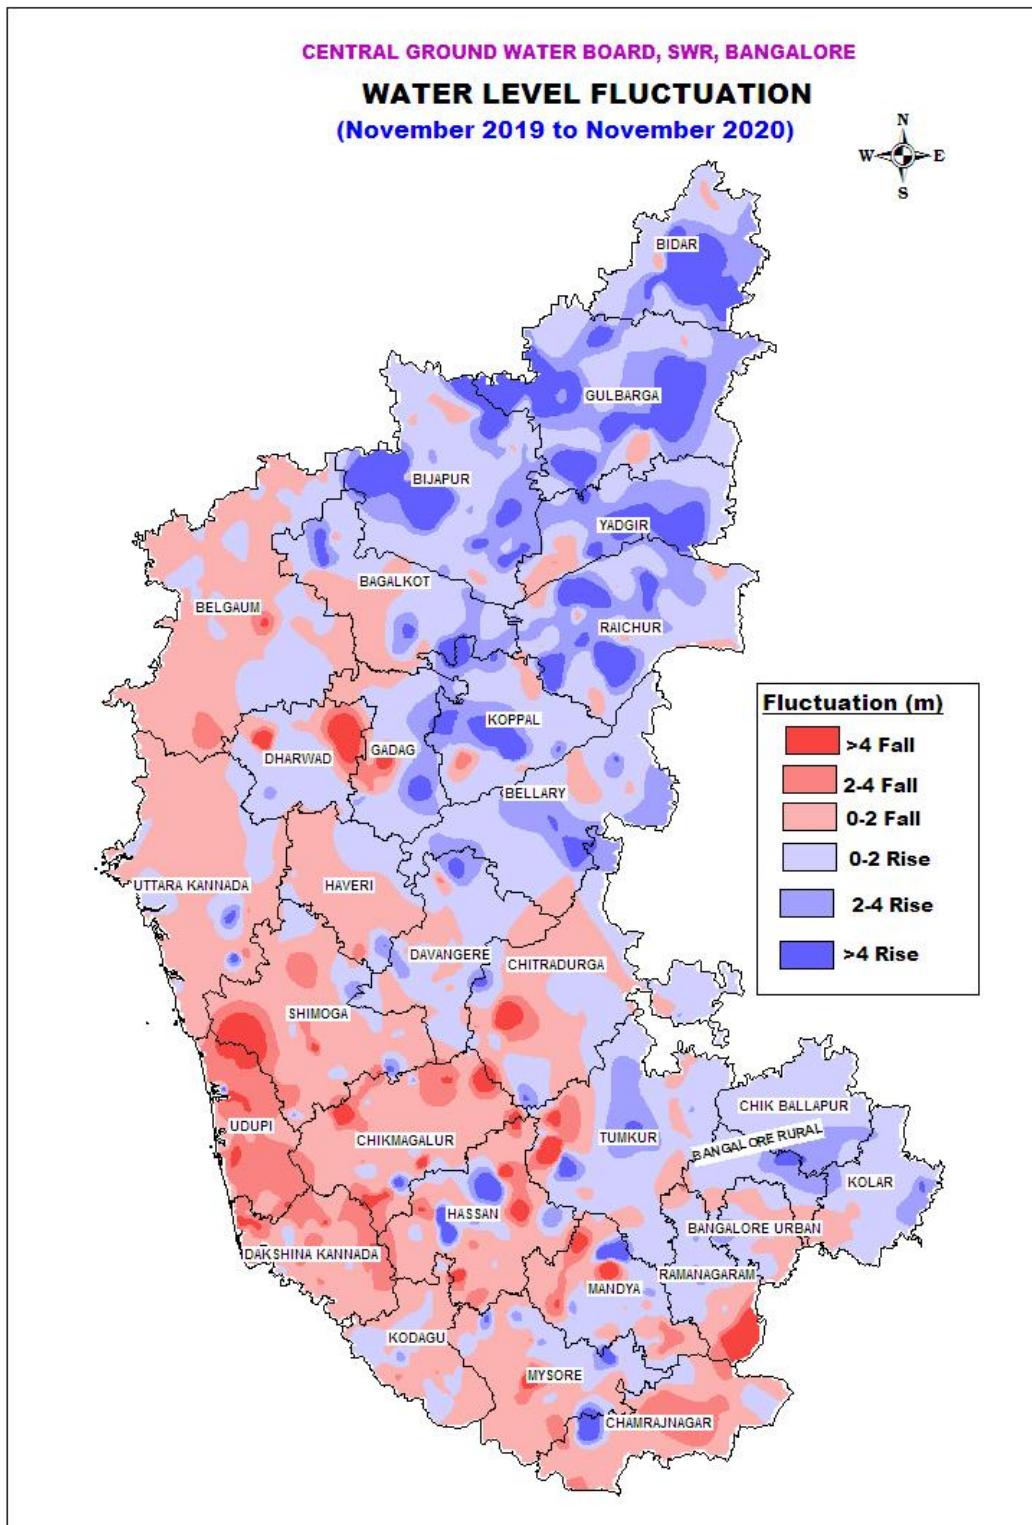

1. Rise in the water level in the range of 0-2 m has been observed in 30 % of wells analysed and observed in all over the State.
2. Rise in the water level in the range of 2-4 m has been observed in 7 % of wells analysed and noted in all districts except in Chamrajnagar, Chitradurga, Dakshin Kannada, Haveri, Udupi and Uttar Kannada districts.
3. Rise in water level more than 4 m has been observed in 8 % of wells analysed and noted in all districts except Bangalore Urban, Belgaum and Kodagu.
4. The fall in water level in the range of 0-2 m has been observed in 43 % of wells analysed and noted in all the districts.
5. The fall in water level in the range of 2-4 m has been observed in 7 % of wells analysed and noted as isolated pockets in Bangalore Rural, Belgaum, Chamrajnagar, Chikmagalur, Chitradurga, Dakshin Kannada, Davanagere, Gadag, Gulbarga, Hassan, Haveri, Kodagu, Koppal, Mandya, Mysore, Shimoga, Tumkur, Udupi and Uttara Kannada districts.
6. The fall in water level more than 4 m has been observed in 5 % of wells analysed and noted as isolated pockets in Bangalore Rural, Belgaum, Chikmagalur, Chitradurga, Dakshin Kannada, Dharwad, Gadag, Hassan, Mandya, Mysore, Shimoga, Tumkur and Udupi districts.

**Table 15 District wise categorisation of water level fluctuation (Nov 2019-Nov 2020)**

## Plate-VII

## JANUARY 2020 & JANUARY 2021

The statement showing the distribution of ground water monitoring wells falling in different ranges of fluctuation is presented in **Table 16**. A comparison of water level shows that a fall in the water level is recorded in 35 % of wells analysed, while 65 % recorded rise. The fluctuation in water level has been plotted in **Plate VIII**. A perusal of the plate shows that a general rise in the range of 0 – 2 m is noticed in major part of the area.

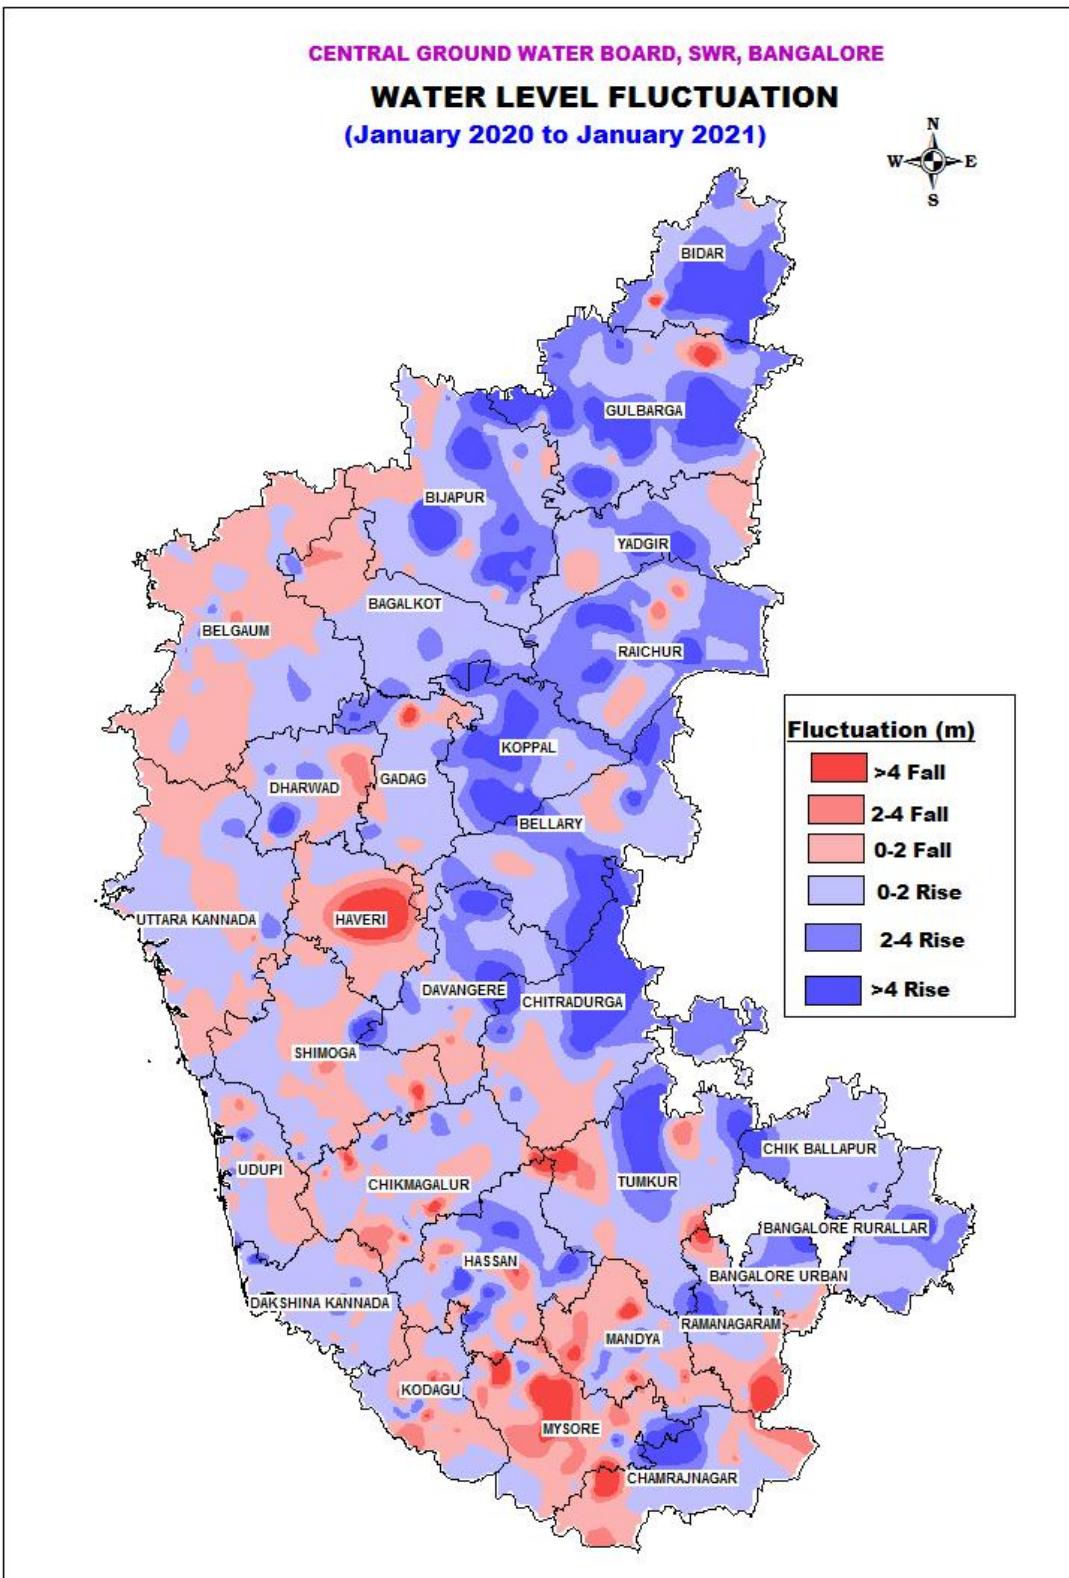

1. Rise in the water level in the range of 0-2 m has been observed in 45% of wells analysed and observed in all over the State.
2. Rise in the water level in the range of 2-4 m has been observed in 12% of wells analysed and noted in all districts except in Chamrajnagar and Haveri.
3. Rise in water level more than 4 m has been observed in 8% of wells analysed. Except Bangalore Urban, Belgaum, Haveri and Uttara Kannada all other districts have recorded more than 4 m rise.
4. The fall in water level in the range of 0-2 m has been observed in 28% of wells analysed and noted in all the districts except Kolar.
5. The fall in water level in the range of 2-4 m has been observed in 4% of wells analysed and noted as isolated pockets in Bagalkot, Bangalore Urban, Belgaum, Chamrajnagar, Chikmagalur, Chitradurga, Davanagere, Dharwad, Hassan, Haveri, Kodagu, Mandya, Mysore, Raichur, Shimoga, Tumkur, Udupi and Uttara Kannada districts.
6. The fall in water level more than 4 m has been observed in 3% of wells analysed and noted as isolated pockets in Bangalore Rural, Bidar, Chamrajnagar, Chikmagalur, Gadag, Gulbarga, Hassan, Haveri, Kodagu, Mandya, Mysore, Shimoga, Tumkur and Udupi districts.

**Table 16 District wise categorisation of water level fluctuation (Jan 2020-Jan 2021)**

**Plate-VIII**

## **FLUCTUATION BETWEEN DECADAL MEAN WATER LEVEL & WATER LEVEL**

The fluctuation of water level recorded during the particular period with respect to decadal mean indicate the impact of ground water development and ground water recharge during the decade. Positive fluctuation indicates improved recharge over and above ground water development and negative fluctuation indicate increased ground water development over and above the recharge.

### **Mean Water Levels For The Period November 2010-2019 & November 2020:**

The statement showing the distribution of ground water monitoring wells falling in different ranges of fluctuation is presented in **Table 17**. The fluctuation in water level has been plotted in **Plate IX**. A comparison of water level shows that a fall in the water level is recorded in 29 % of wells analysed, while 71 % recorded rise. Salient features of the comparison of water levels are given below.

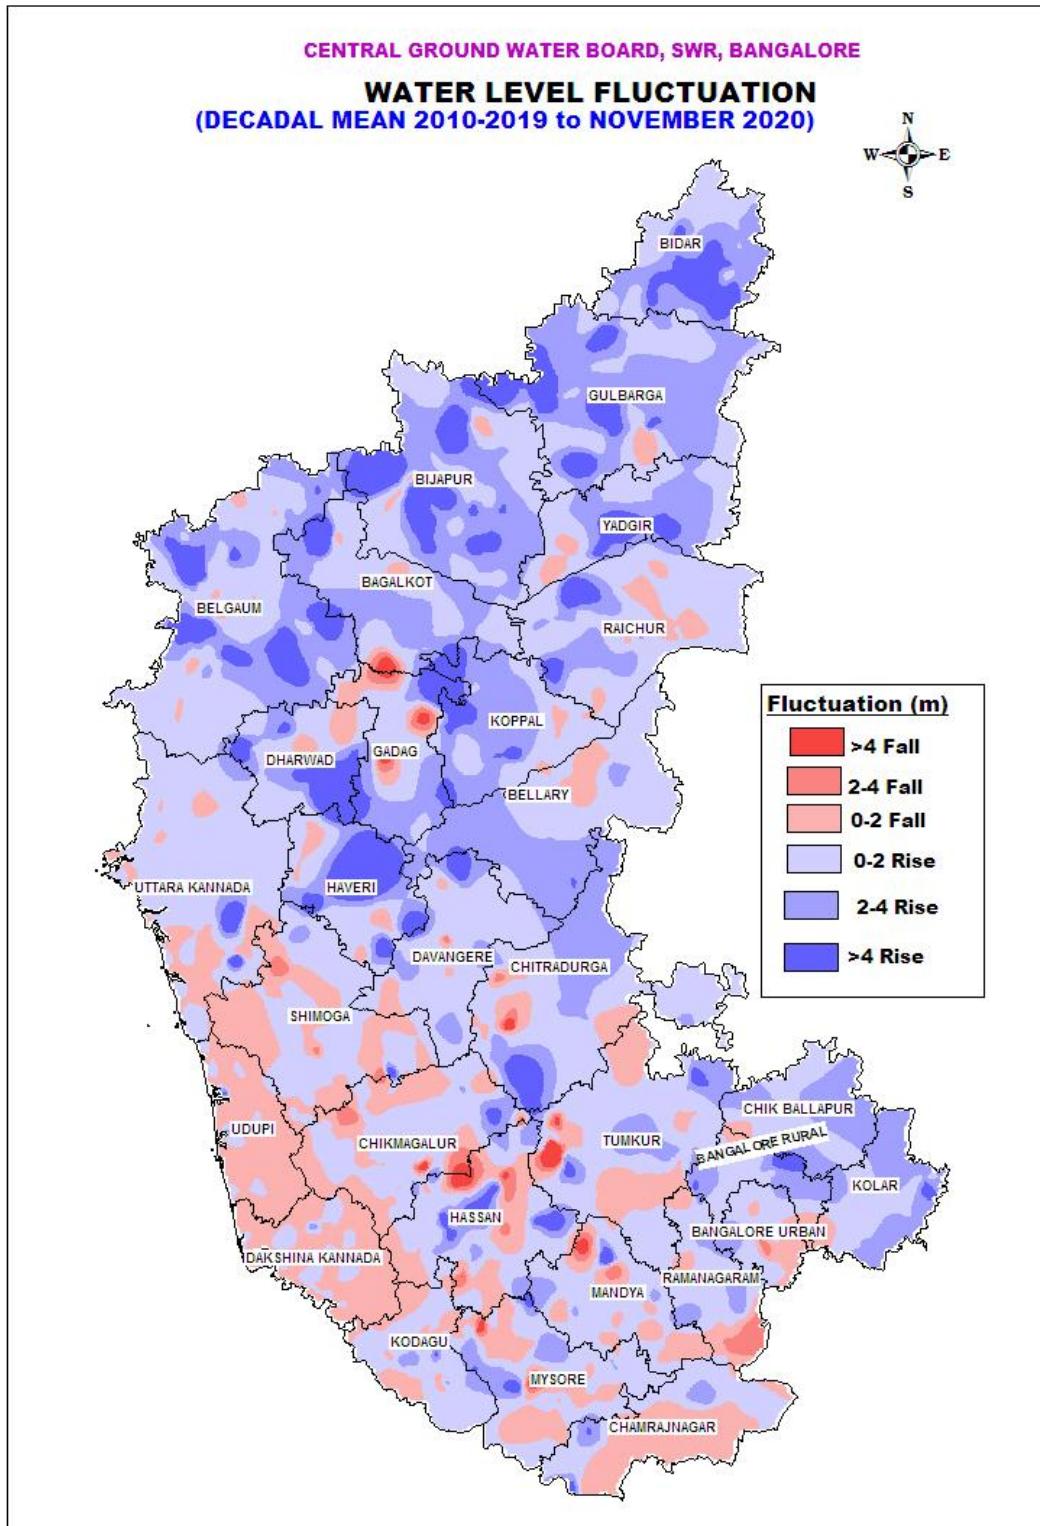

1. Rise in the water level in the range of 0-2 m has been observed in 48 % of wells analysed, noted all over the State.
2. Rise in the water level more than 2-4 m has been observed in 14 % of wells analysed and noted in all over the State.
3. Rise in the water level more than 4 m has been observed in 9 % of wells analysed and noted in all over the State except Bangalore Urban district.
4. The fall in water level in the range of 0-2 m has been observed in 25 % of wells analysed and noted in all over the State except Bidar district.
5. The fall in water level in the range of 2-4 m has been observed in 3 % of wells analysed and noted in Bangalore Rural, Bangalore Urban, Bijapur, Chikmagalur, Chitradurga, Dakshin Kannada, Davangere, Hassan, Mandya, Shimoga, Tumkur and Udupi districts.
6. The fall in water level more than 4 m has been observed in 1 % of wells analysed and noted in Bagalkot, Bangalore Rural, Chikmagalur, Chitradurga, Dakshin Kannada, Gadag, Gulbarga, Hassan, Mandya, Mysore, Shimoga, and Tumkur districts.

## Plate-IX

## **Mean Water Levels For The Period January 2011-2020 & January 2021:**

The statement showing the distribution of ground water monitoring wells falling in different ranges of fluctuation is presented in **Table 18**. The fluctuation in water level has been plotted in **Plate X**. A comparison of water level shows that a fall in the water level is recorded in 23% of wells analysed, while 77% recorded rise. Salient features of the comparison of water levels are given below.

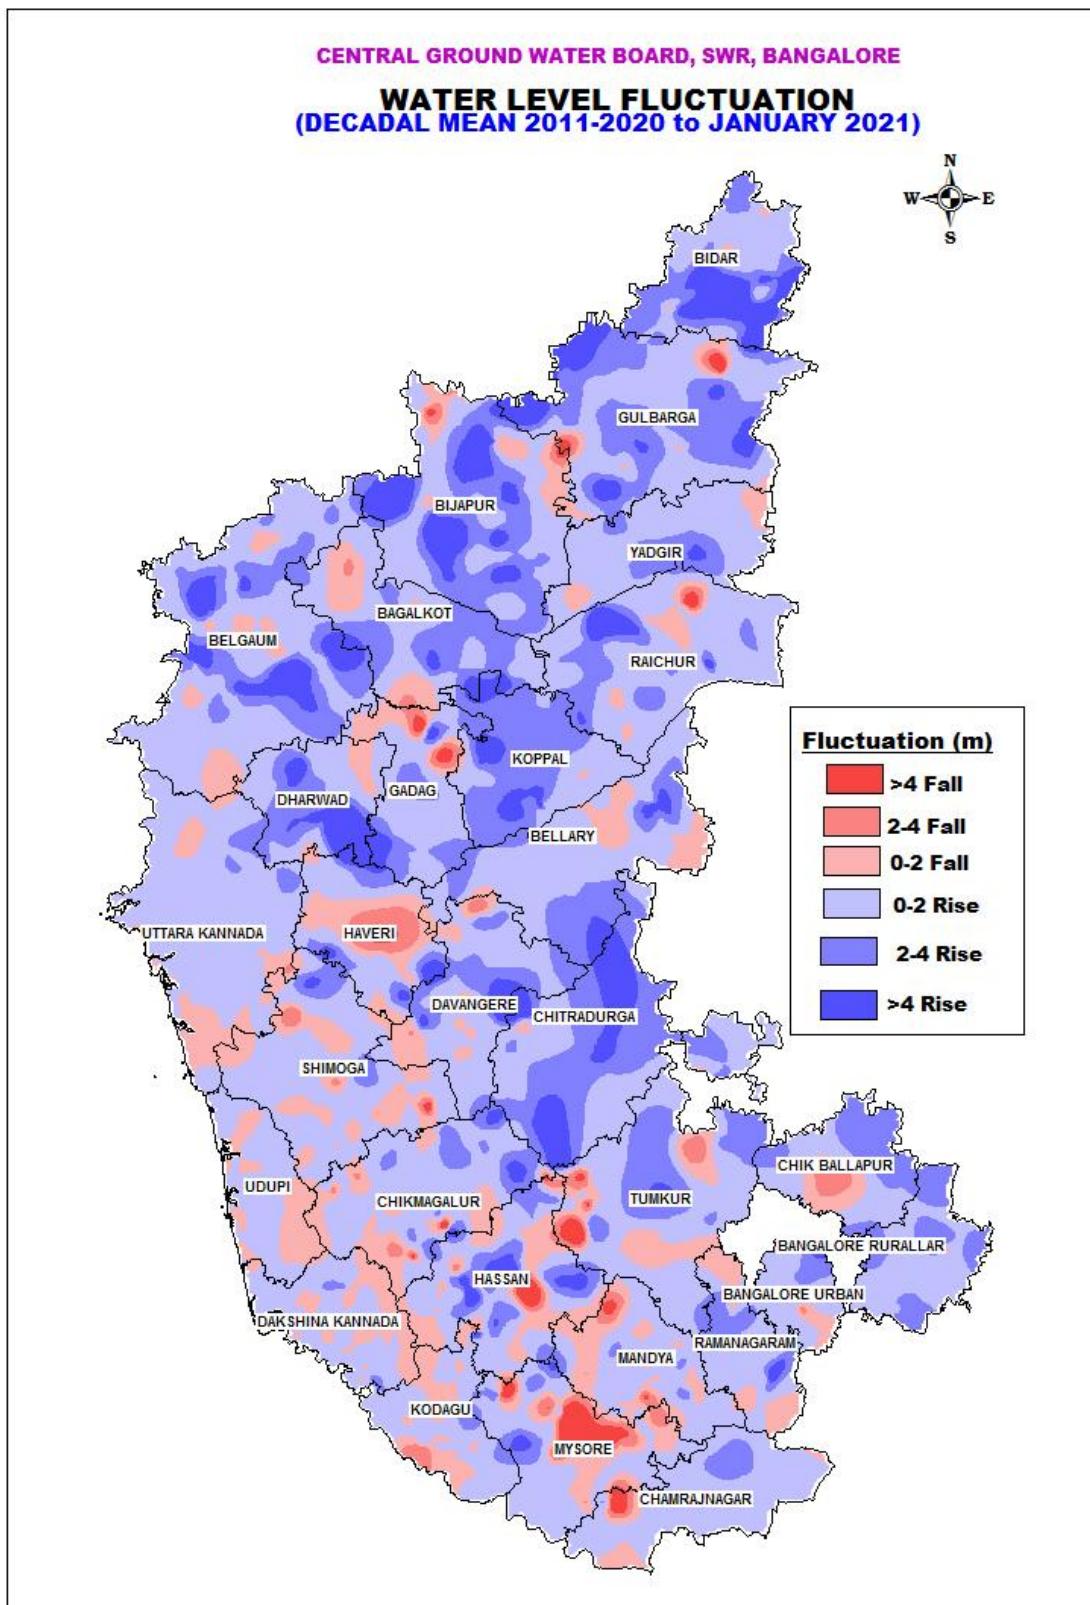

1. Rise in the water level in the range of 0-2 m has been observed in 53% of wells analysed, noted all over the State.
2. Rise in the water level more than 2-4 m has been observed in 16% of wells analysed, noted all over the State.
3. Rise in the water level more than 4 m has been observed in 8% of wells analysed and noted in all over the State except Bangalore Urban, Mandya, Udupi and Uttara Kannada districts.
4. The fall in water level in the range of 0-2 m has been observed in 18% of wells analysed and noted in all the districts.
5. The fall in water level in the range of 2-4 m has been observed in 3% of wells analysed and noted in Bagalkot, Bangalore Rural, Bangalore Urban, Bijapur, Chikmanagalur, Dakshin Kannada, Davanagere, Hassan, Haveri, Kodagu, Kolar, Mandya, Mysore, Shimoga, Tumkur and Uttara Kannada districts.
6. The fall in water level more than 4 m has been observed in 2% of wells analysed and observed in Bangalore Rural, Bidar, Bijapur, Chamarajnagar, Chikmagalur, Gadag, Gulbarga, Hassan, Haveri, Mandya, Mysore, Raichur, Shimoga and Tumkur districts.

#### IV. HYDROCHEMISTRY

The quality of shallow ground water in Karnataka state has been evaluated by sampling and analysis of water sample collected from Ground Water Monitoring wells. About 818 Ground Water Monitoring wells were monitored for water quality during May 2019 representing pre-monsoon water quality. The district wise chemical analysis data of the samples are given in the **Annexure-IV**. The summarized results of ground water quality ranges are given in **Table 19**.

**Table 19: Ground water quality of SWR, during May-2019**

S. No	Parameters		Range	No. of sample	Percent age
1	Electrical Conductivity $\mu\text{s}/\text{cm}$ at $25^\circ\text{C}$	Fresh	< 750	418	51.0
		Moderate	751-2250	329	40.0
		Slightly mineralized	2251-3000	29	04.0
		Highly mineralized	> 3000	42	05.0
2	Chloride mg/l	Desirable limit	< 250	691	84.0
		Permissible limit	251-1000	119	15.0
		Beyond permissible limit	> 1000	08	01.0
3	Fluoride mg/l	Desirable limit	< 1.0	571	70.0
		Permissible limit	1.1- 1.5	142	17.0
		Beyond permissible limit	>1.5	105	13.0
4	Nitrate mg/l	Permissible limit	<45	661	81.0
		Beyond permissible limit	> 45	157	19.0

Distribution of electrical conductivity is shown in **Plate XI**. In general, the ground water quality in the state is fresh in about 51 % of the Ground Water Monitoring wells as indicated by the EC value less than  $750 \mu\text{s}/\text{cm}$  at  $25^\circ\text{C}$ . In about 40 % of the Ground Water Monitoring wells, the EC varies between  $751 - 2250 \mu\text{s}/\text{cm}$  at  $25^\circ\text{C}$  and 4 % of Ground Water Monitoring wells are between  $2251-3000 \mu\text{s}/\text{cm}$  at  $25^\circ\text{C}$  indicating that the ground water is slightly mineralized and about 5 % of Ground Water Monitoring wells the EC is more than  $3000 \mu\text{s}/\text{cm}$  at  $25^\circ\text{C}$  indicating that the ground water is highly mineralized. The highest value  $9980 \mu\text{s}/\text{cm}$  at  $25^\circ\text{C}$  was observed in Alagur,

Bagalkot district. The details of well showing EC more than 3000  $\mu\text{s}/\text{cm}$  at 25° C is given in **Table 20**.

**Table 20: Details of well shows Electrical conductivity more than 3000  $\mu\text{s}/\text{cm}$  at 25°C during May 2019**

## **V. CONCLUSIONS**

The behaviour of ground water table during May 2020 to January 2021 in Karnataka has been studied by monitoring the dug wells tapping phreatic aquifers. The data on water levels were analysed in detail and salient features are as under.

1. 74% of wells have recorded depth to water level within 10 m bgl during premonsoon period (May 2020).
2. During post-monsoon period (November 2020), about 93% of wells recorded water levels less than 10 m bgl; this may be due to Excess/Normal rainfall received in many districts during south west monsoon.
3. 87% of wells have recorded depth to water level within 10m bgl during August 2020 and 90% during January 2021.
4. 45% of wells have recorded rise in water levels and 55% of wells have recorded fall in water levels during November 2020 in comparision to November 2019.
5. 71% of wells have recorded rise in water levels and 29% of wells recorded fall in water levels during November 2020 in comparision to decadal mean.
6. 77% of wells have recorded rise and 23% have recorded fall in water levels during January 2021 with respect to respective decadal means.
7. In general, the ground water quality in the state is fresh in about 51 % of the Ground Water Monitoring wells as indicated by the EC value less than 750  $\mu\text{s}/\text{cm}$  at 25°C. In about 40 % of the Ground Water Monitoring wells, the EC varies between 751 -2250 $\mu\text{s}/\text{cm}$  at 25° C and 4 % of Ground Water Monitoring wells are between 2251-3000  $\mu\text{s}/\text{cm}$  at 25° C indicating that the ground water is slightly mineralized and about 5 % of Ground Water Monitoring wells the EC is more than 3000  $\mu\text{s}/\text{cm}$  at 25°C indicating that the ground water is highly mineralized. The highest value 9980  $\mu\text{s}/\text{cm}$  at 25° C was observed in Alagur, Bagalkot district.
8. The chloride content is less than 250 mg/l in about 84 % of the sample analyzed and 15 % of the sample are between 251 – 1000 mg/l and 1 % shows more than 1000mg/l which are from the districts of Bagalkot, Belgaum, Bijapur, Ddkshin Kannada, Gadag, Koppal, Raichur and Udupi.
9. The Fluoride content is less than 1.5 mg/l in about 87 % of the sample analyzed and about 13% of the sample shows more than 1.5 mg/l, which are from the districts of Bagalkot, Bellary, Bidar, Bijapur, Chitradurga, Davanagere, Gadag, Gulbarga, Hassan, Haveri, Kolar, Koppal, Raichur, and Yadgir.
10. The Nitrate content is less than 45mg/l in about 81 % of the sample analyzed and and 19 % of sample shows more than 45 mg/l which are from the district of Bagalkot, Bangalore Rural, Bangalore Urban, Belgaum, Bellary, Bijapur, Chamarajanagar, Chickmagalur, Chitradurga, Dakshina kannada, Davanagere, Gadag, Gulbarga, Hassan, Kolar, Koppal, Mysore, Raichur, Ramnagara, Shimoga, Tumkur and Yadgir.

## **ACKNOWLEDGEMENTS**

The authors express their gratitude to Shri V.Kunhambu, Regional Director, Central Ground Water Board, South Western Region, Bengaluru for his constant encouragement throughout the task of compilation and analysis of voluminous data. The authors also profusely thank the hard and arduous work put in by various field officers who diligently collected data and water samples from the field, which forms the base for this report. The authors profoundly thank the huge contribution made by the Officers and staff of the Water Quality Laboratory who have analysed the large number of water samples and interpreted the analysis results thereof. The authors would be failing in their duty if they do not acknowledge the unstinting cooperation offered by their various colleagues who have contributed in a major way in bringing out this report.
